

“Where will our knowledge take you?”

Program Management Services

The management consultancy team at BMT Fleet Technology (BMT) offers customers services focussed on reducing uncertainty within large-scale engineering programs by applying rigour to program, risk, cost management, schedule, resource management and performance, thereby providing the greatest chance for project success.

Maritime Equipment Program (MEP) Integrated Program View (IPV)

BMT is working with the Canadian Department of National Defence to develop a framework to help its Maritime Equipment Program Management (MEPM) division establish and maintain a holistic approach to managing the complex programs within its purview.

Resources

BMT's highly experienced consultants have a pragmatic understanding of program management and enterprise architecture and how they interact so they can bring clarity and understanding to client programs.

In addition to its own project management professionals, BMT can draw upon the experience of its many affiliates within the BMT Group.

BMT Approach

With a focus on making real change, closing gaps and transferring knowledge, BMT analyzes and assesses current processes, makes recommendations and supports implementation of program management improvements to create a sustainable model that organizations can adopt in the future with their own staff.

Program Management Services

BMT's program management services include:

- Project planning, execution, control and management
- Project monitoring and earned value management
- Cost modelling, analysis and control
- Change and communications management
- Project scheduling
- Risk and issue management
- Configuration and data management
- Quality assurance and quality control
- Systems engineering and enterprise architecture
- Health check/audit and optimization of existing processes and resources

BMT experts can help clients overcome common challenges associated with complex engineering programs such as:

- Gaps in capacity and competency
- Development and maintenance of requirements, schedules, work breakdown structures and resource plans
- The need for a plan of action that drives to a set of clear goals and objectives
- Navigation of government and large corporate matrices and processes
- Adopting and maintaining project management best practices
- Frequent staff turnover
- Stakeholder pressures to deliver value for money and return on investment

Industry Engagement Support

A critical part of major procurement programs is the ability to engage industry early in the process so that buyers are aware of options and capabilities available to them while building requirements and specifications. BMT provides customers with industry engagement services that support project teams with understanding of Industrial and Technological Benefits (ITBs), Canadian content constraints, market analysis, awareness of industry capabilities and procurement approaches and contracting issues.

Services we offer include:

- Program management office (PMO) interface and support
- Industry workshop facilitation
- Industry day event coordination and management
- Facilitating meetings with industry

Joint Support Ship (JSS)

BMT engaged with industry on behalf of the Government of Canada to obtain technical and costing data to inform a value-for-money comparison of proposed designs for the JSS vessels.
